

Transcranial Magnetic Stimulation (TMS)

Modalis clinics specialise in MRI-guided Transcranial Magnetic Stimulation (TMS), improving the treatment options for depression, OCD, PTSD, chronic pain, tinnitus & more.

TMS works by non-invasively stimulating the neural pathways to help alleviate symptoms in patients who don't respond to medications.

MRI-guided neuronavigation allows us to precisely position the coil over the target site within millimeter accuracy, taking into consideration the patient's personal anatomical brain structure.

TMS is TGA-approved, and available on an out-patient basis, with only few side-effects.

Medicare rebates and DVA funding now also available for eligible* patients referred for depression.

Referral forms for TMS at Modalis can be found on our website at www.modalis.com.au.

Now even more convenient.

With Modalis TMS therapy available at multiple locations, our growing list of trusted providers can help you access treatment closer to you, safely and conveniently.
